Anderson Creek Watershed

Mission of the Anderson Creek Watershed Association

The Anderson Creek Watershed Association is formed to promote the restoration and enhancement of the natural resources within Anderson Creek watershed. This mission will be accomplished by educating the public, promoting the wise use of resources, encouraging the partnerships necessary to restore and conserve water quality and quantities and by securing the technical and financial resources to meet this challenge. The Association is organized exclusively for charitable and educational purposes including the making of distributions to organizations that qualify as exempt organizations under section 501 (c) (3) of the Internal Revenue Code, or corresponding section of any future federal tax code.

The Anderson Creek watershed is located in Clearfield County and occupies portions of Bloom, Brady, Pike, and Union Townships. It is approximately 78 square miles and is the primary source of drinking water for DuBois and Curwensville. Anderson Creek flows a distance of about 20 miles and has a vertical drop of 960 feet. The two major tributaries of Anderson Creek are Kratzer Run and Little Anderson Creek. Kratzer Run flows about 5.7 miles and has a vertical drop of 420 feet, and Little Anderson Creek flows about 9.7 miles and has a vertical drop of 460 feet. Anderson Creek north of its confluence with Little Anderson Creek is free of any major pollutants. The primary source of pollution of Little Anderson Creek and Kratzer Run is mine acid.
